(54) Title: DRINK CONTAINER HOLDING APPARATUS

(57) Abstract: ABSTRACT DRINK CONTAINER HOLDING APPARATUS  
A drink container holding apparatus includes an object attachment device (40) including a holder engagement means (5), and a drink container holder (31) including attachment device engagement means (30) to engage with the holder engagement means (5). The holder engagement means (5) and the attachment device engagement means (30) allow relative angular movement between the object attachment device (40) and the holder (31) in a selected plane. The holder (31) and the object attachment device (40) can be engaged or disengaged by orientating the holder engagement means (5) and the attachment device engagement means (30) in a pre-determined relative angular disposition in the selected plane, and moving the attachment device engagement means (30) and holder engagement means (5) relative to each other in a direction perpendicular to the selected plane. To be accompanied by Figure 4.
